92211 92212 92213 X 92214 92215 Dr. Kadet Physician Time: 15 min

Dr. Exam & Orders: Basic Rules and Concepts. Begin IMLFA or short form assessment. IM - 75 to 125 reps, add Ma Moves. Vergence - smooth breaks, will likely need lots of anti-suppression protocols. Accommodation - ranges. Tracking - monocular pursuits and saccades with no load factor.

Goals:

Notes:

Homework: Prescribe PVT. Prescribe monocular thumb pursuits and saccades and Marsden Ball within next two sessions.
***Assigned PVT plus MONO Thumb Pursuits and Saccades.

Activity: Basic Rules & Concepts

Assessment: Thomas wasn't sure why he was here. We talked about school and learning to read better and teaching his brain to see things in a better way.

Activity: MONO Thumb Pursuits & Saccades

Assessment: Went over these with both Thomas and Mom. His side-side tracking looks good, but up/down and diagonal were more of a challenge. He could also perceive this. His saccades looked pretty good. He was diligent about holding his head still. Mom will work with him at first on these, then he will do on his own.

Activity: Pursuits/Tracking

Assessment: VTS3 Left/Right Dinosaur
A little OS suppression at first, then he could see both. We did this for 3 minutes on Speed 2. It took him a little bit to use the mouse and do the procedure correctly, but his tracking looked fairly good. He thought the procedure was easy. Got 56%.

Activity: Vergence

Assessment: VTS3 Large Duck.
BI: 10.50/9.0
BO: 13.0/12.5 His reporting is good. He's very aware of what he sees and when it changes.

Activity:

Assessment:

93211 93212 93213 X 93214 93215 Dr. Kadet Physician Time 15 min

Dr. Cad & Orders: Basic Rules and Concepts. Begin MLFA or short form assessment. BI - 75 to 125 reps, add Me Moves. Vergence - smooth breaks, will likely need lots of anti-suppression protocols. Accommodation - ranges. Tracking - monocular pursuits and saccades with no load factor.

Goal: 3/18/12- Improve reading. Words drift up and down. tired eyes, diplopia (esp. w/o glasses) to see things in a better way.

Notes:

Homework: Monitor PVT. Monitor monocular thumb pursuits and saccades. Prescribe Marsden Ball within next two sessions. PVT- Been doing every day. He does it by himself. Suggested to Mom it would be better if someone could watch him to point out to him when he is moving head. 30% done.

Activity: Monocular Tennis Pursuits (VB)

Assessment: OD: 18
OS: 12
lots of head movement. Needs lots of reminders to hold it still. Balancing a koosh ball on it helped.

Activity: Binocular Tennis Pursuits (VB) w/ R/B glasses

Assessment: no issues. Kept working on head movement.

Activity: Visual Scan w/ Blue Flipper

Assessment: OD: 4m57.8s
OS: 4m28.1s
plus side was easier. Took him a long time to finish.

Dr. Visit & Orders: IM - 375-400 reps, add Mc Moves. Vergence - smooth breaks, will likely need lots of anti-suppression protocols. Accommodation - ranges. Tracking - binocular pursuits and saccades with mild vestibular load factor.

Goal: 3/19/12- Improve reading. Words drift up and down. tired eyes. diplopia (esp. w/o glasses) to see things in a better way.

Notes: 11/19/12- He is getting graded in reading on how fast he can read and his reading comprehension. Comprehension is really good and he reads high school level books etc., but at school they are rating him as 3rd grade due to speed, doesn't sound like there is any control to encourage him to read faster, they just time how long he takes to read a page. I discussed moving window with mom and she would like to try to see if he is capable of reading faster than he is choosing. Also maybe with speed practice he will choose to read faster. Try moving window next time.
8/4/12- Reading the 5th Harry Potter Book.
8/20/12- Use lots of anti-suppression materials

Recommend: Monitor monocular and binocular thumb pursuits and saccades. Monitor Marsden Ball. Monitor HTS-none last week. Still a lot of vergence issues. Monitor Brock String. Monitor R/G Transglyph.

Holds in Hand Saw right away

Activity: VTS3 Jump Duction -Large Stereopsis

Assessment: Rt: 8.5
80: 15

Activity: VTS3 Acc Rock w/ Green Flipper

Assessment: OD: 98.53%
OS: 100%
9.91 cyc/min

Activity: Peripheral Vision

Assessment: Penny Snatcher: no issues
V.O. Star: he couldn't keep eyes fixated on center, kept doing saccadic

Activity: 2-D Spatial Reasoning w/ 7 Pd

Assessment: no diplopia.

Discharge Date: 11/18/12 Therapist: [REDACTED] Status: X Time: 40 min.

Additional:

Refraction: Current Rx (OD, OS): Refract: Green Near Lens: +4.00 OverRx: Near Prisma: 6.7
Vision: 26 +2.75 with +1.60 add Dist Lens: +3.00 NO Dist Prisma: 5.6

08211 08212 08213 X 08214 08215 Dr. Kadet Physician Time: 15 min

Dr. Find & Order: RA - 375-400 reps, add Me Moves. Vergence - smooth breaks, will likely need lots of anti-suppression protocols. Accommodation - ranges. Tracking - binocular pursuits and saccades with mild vestibular load factor. Add moving windows (see notes below).

Goal: 3/19/12- Improve reading. Words drift up and down. tired eyes, diplopia (esp. w/o glasses) to see things in a better way.

Notes: 11/19/12- He is getting graded in reading on how fast he can read and his reading comprehension. Comprehension is really good and he reads high school level books etc., but at school they are rating him as 3rd grade due to speed, doesn't sound like there is any control to encourage him to read faster, they just time how long he takes to read a page. I discussed moving window with mom and she would like to try to see if he is capable of reading faster than he is choosing. Also maybe with speed practice he will choose to read faster. Try moving window next time.
9/4/12- Reading the 5th Harry Potter Book.
8/20/12- Use lots of anti-suppression materials

Homework: Monitor monocular and binocular thumb pursuits and saccades. Monitor Marsden Ball. Monitor HTS-one time last week. Still a lot of vergence issues. Monitor Brock String. Monitor R/G Transaglyph.
